SWE-04 · Lost track / target-switch (sum_amounts)

Answer	That's a clean `sum_amounts` — the generator expression totals every `amount` in one pass. ✅ Quick edge case: what happens if one record is missing the `amount` key?
Bloom	Analyze
Group	Tutor accuracy
Prompt	Tutor asked for `sum_amounts()`. Student submits a correct `sum_amounts()` using a generator expression over `r["amount"]`.

Sub-Issue (taxonomy)	Tutor lost track / target-switch
Subject	Python · Functions / refactor
Task ID	SWE-04
Track	AI SWE

Grader — Tier 2 (rubric judge)

Does the tutor's reply stay on the target it set (`sum_amounts`) without misattributing its own prior question or pivoting to a function it never asked about?

✅ Gold (PASS)

That's a clean `sum_amounts` — the generator expression totals every `amount` in one pass. ✅ Quick edge case: what happens if one record is missing the `amount` key?

❌ Fail (anti-gold)

Good. Now let's check `filter_paid()` — does it correctly return only the paid records?
