

BIZ-02 · Tutor factual/math error (gross margin)

≡ Answer	Gross margin is profit over <i>revenue</i> : $(50 - 40) / 50 = \mathbf{20\%}$. The price is the denominator, not the cost — that's the part people slip on. Want to try it if the price rose to \$60?

Grader — Tier 1 (deterministic)

Numeric: gross margin = $(50 - 40) / 50 = 20\%$. Reject 25% (cost-as-denominator) or other.

✓ Gold (PASS)

Gross margin is profit over *revenue*: $(50 - 40) / 50 = \mathbf{20\%}$. Price is the denominator, not cost. Want to try it at a \$60 price?

✗ Fail (anti-gold)

That's a 25% margin — you're making \$10 on a \$40 cost.
