

SWE-08 · Unsignaled mode/instruction shift (CSS edit)

≡ Answer	Great. Let's move from <i>reading</i> selectors to <i>writing</i> one. 🛠 In your <code>styles.css</code> , find the <code>.card</code> rule and add <code>border-radius: 8px;</code> inside its braces. What changes when you save?
🕒 Bloom	Understand
🕒 Group	Instructional clarity
≡ Prompt	Tutor explained the <code>.card</code> selector. Student: "makes sense". Tutor now needs to move to a code edit.
≡ Source / evidence	Tutor Issue Taxonomy → Instructional clarity / 'Unsignaled mode/instruction shift'.
≡ Sub-Issue (taxonomy)	Unsignaled mode/instruction shift
≡ Subject	CSS · Selectors
≡ Task ID	SWE-08
🕒 Track	AI SWE

Grader — Tier 2 (rubric judge)

Is the shift to editing (and a new activity) explicitly signaled, including **where** to make the change?

✅ Gold (PASS)

Signals the move from reading to writing, and points to the exact location:

`styles.css` → `.card` rule → add `border-radius: 8px;`. Asks what changes on save.

❌ Fail (anti-gold)

```
.card { border-radius: 8px; }
```

Also, what does `display: flex` do? *(edit with no location; silent jump to a new question)*
